PROFESSIONAL SUMMARY

Backend developer with approximately 1 year of professional experience building RESTful APIs and microservices using Python and FastAPI. Skilled in designing PostgreSQL-backed services with 30+ API endpoints, writing 280+ automated tests with Pytest, and integrating Apache Kafka, Redis, and Docker into production-ready microservice architectures. Experienced in JWT authentication, role-based access control (RBAC), and OpenAPI contract-driven development.

TECHNICAL SKILLS

Languages:	Python, JavaScript, SQL
Backend:	FastAPI, REST APIs, Pydantic, SQLAlchemy ORM, Node.js
Frontend:	HTML5, CSS3, JavaScript
Databases:	PostgreSQL, MongoDB, MySQL, SQLite
Messaging & Caching:	Apache Kafka, Redis
Auth & Security:	JWT, RBAC, API Key Authentication
Testing & API Tools:	Pytest, Postman, Swagger / OpenAPI
DevOps & Tools:	Docker, Git, GitHub, Alembic, Visual Studio Code

PROFESSIONAL EXPERIENCE

Python Backend Developer | Speshway Solutions Pvt. Ltd. Dec 2025 – Present

Hyderabad, India

- Developed RESTful APIs using Python and FastAPI with Pydantic validation, maintaining OpenAPI (Swagger) documentation for consistent API development and service integration.
- Designed and integrated PostgreSQL databases using SQLAlchemy ORM, writing optimised SQL queries and managing schema migrations with Alembic to support evolving backend data requirements.
- Implemented JWT authentication and role-based access control (RBAC) to secure API endpoints, enforcing authorization policies across all backend services.
- Built Apache Kafka consumer services to enable event-driven architecture and asynchronous communication between microservices, processing domain events for service integration.
- Configured Redis caching for frequently accessed data, reducing redundant database queries and improving backend response performance.
- Automated testing with Pytest, writing unit tests, integration tests, and API contract tests to maintain a reliable CI pipeline for continuous backend development.
- Collaborated on backend integration using Git and GitHub pull-request workflows, conducting code reviews and resolving service integration defects across development cycles.

PROJECTS

EAICSP – Enterprise AI & Supply Chain Platform

Module: Inventory Service

Technologies: Python, FastAPI, PostgreSQL, Redis, Apache Kafka, Docker, Pytest, REST APIs

- Developed 30+ RESTful inventory APIs with FastAPI and PostgreSQL, modelling a 3-tier warehouse hierarchy (central, regional, and local) with 15+ database tables.
- Implemented purchase-order draft-to-approval workflows with 4 role-based permission levels to enforce configurable approval policies across 5 order status transitions.
- Integrated supplier compliance validation into PO workflows, verifying regulatory and contractual obligations via 2 external service APIs before order confirmation.

- Built FIFO and weighted-average inventory valuation logic across 2 costing methods to maintain accurate cost-of-goods tracking across all stock movements.
- Applied optimistic locking on concurrent inventory updates to prevent race conditions, maintaining data consistency across simultaneous warehouse operations.
- Wrote 280+ Pytest test cases covering API contracts, integration flows, and edge cases, achieving 0 failures across the full regression suite.
- Implemented Kafka-driven event consumers and reorder-point recommendation logic to react to supplier compliance status-change events in real time.

E-Commerce Web Application | Full-Stack MERN Project

Technologies: MongoDB, Express.js, React.js, Node.js, JavaScript

- Developed a responsive React.js frontend with 10+ reusable components enabling product browsing, search filtering, and dynamic cart management.
- Built RESTful backend APIs using Node.js and Express.js to handle product catalog operations, user authentication, and end-to-end order processing.
- Designed 4 MongoDB collections for products, users, carts, and orders, supporting a complete checkout and order-tracking workflow.
- Integrated frontend and backend components to deliver a full e-commerce purchase flow from product discovery to order confirmation.

INTERNSHIP

Web Development Intern | CSEdge

- Developed responsive web pages using HTML5, CSS3, and JavaScript, applying DOM manipulation techniques to build interactive UI components across multiple page layouts.
- Gained practical exposure to front-end development workflows, DOM manipulation, and collaborative version control using Git and GitHub.

EDUCATION

B.Tech – Computer Science and Engineering CGPA: 8.1 / 10

Narayana Engineering College, Gudur, Andhra Pradesh | Dec 2021 – Apr 2025

Intermediate – MPC CGPA: 9.1 / 10

LVR Junior College, Nellore, Andhra Pradesh | Jun 2019 – May 2021

ACHIEVEMENTS

- Awarded a prize at the college-level Project Expo for presenting a technically strong project demonstration.
- Participated in the NIPUNA state-level technical skill development programme, gaining exposure to industry-relevant technical practices.
